ZENFINANCE — DATA INVENTORY & PRIVACY DISCLOSURES

App Store Privacy Answers

Last updated: 2026-07-12

Use this as the source inventory for App Store Connect's App Privacy section. Apple requires the answers to cover ZenFinance and third-party SDKs/processors integrated into the app.

Privacy Policy URL

<https://zenfinance.rushingtechnologies.com/privacy>

Tracking

ZenFinance does not track users across apps or websites owned by other companies, and it does not sell data.

Data Linked To The User

App Store data type	Collected	Purpose	Notes
Contact Info: Email Address	Yes	App functionality, account management, support	Stored in Postgres. Used for sign-in/support only.
Financial Info: Payment Info	No	N/A	App Store and RevenueCat process subscription and one-time purchase state; ZenFinance stores entitlement status, product id, renewal/cancellation dates, non-subscription transaction id, and RevenueCat app user id, not card details.
Financial Info: Credit Info	No	N/A	Not collected.
Financial Info: Other Financial Info	Yes	App functionality, analytics within the product	Plaid account balances, account metadata, transactions, recurring streams, goals, shared household goals, Freelancer Mode profile settings, alerts, coaching artifacts, generated Voice Brief scripts, and generated Money Physical reports.
User Content: Customer Support	Yes	Support	Support tickets submitted on the site/API.
Identifiers: User ID	Yes	App functionality, account management	Internal user id and RevenueCat app user id.
Purchases	Yes	App functionality	Subscription entitlement/product status and Money Physical non-subscription transaction status from RevenueCat.
Usage Data: Product Interaction	Yes	Analytics	First-party app events only: registration, linking, paywall, coach use, referrals, Voice Brief playback, Money Physical purchase/report events, Household Sharing use, Freelancer Mode use, and beta/launch retention events.
Diagnostics: Crash Data	Yes	App stability	Sentry with <code>sendDefaultPii=false</code> and server-side scrubbing.

Data Not Linked To The User

Aggregate launch metrics may be published without linking to a user only after the minimum sample size is reached. These are derived from first-party app data and do not include raw transactions or user-level slices.

Third-Party Processors And SDKs

Processor/SDK	Data shared	Purpose
Plaid	Institution account metadata and transactions through the user's linked item	Read-only account linking and transaction sync.
RevenueCat	App user id, subscription product/entitlement state, Money Physical non-subscription transaction state, store receipt handling	App Store subscription entitlement and one-time purchase management.
Anthropic	Compact coaching context and redacted transaction summaries, not raw access tokens or credentials	Transaction enrichment and coaching brief generation when enabled.
Sentry	Crash/error diagnostics after PII scrubbing	Reliability and crash triage.
Expo Notifications/APNs	Push token and notification delivery metadata	Weekly briefs, anomalies, goal pacing.
Resend	Support ticket email content	Forwarding support requests to support@rushingtechnologies.com .

Privacy Choices

Users can:

- Disconnect a linked bank item from Settings.
- Export their data from Settings or `GET /api/me/export`.
- Delete the account from Settings or `DELETE /api/me`; the API revokes provider items, cascades the database delete, and writes a non-PII deletion audit event.
- Share or redeem referral codes from Settings; referral records are deleted with the account.
- Pause or edit Freelancer Mode settings from Settings; profile rows are deleted with the account.
- Create, join, or leave a household from Settings; household membership is deleted with the account, while shared-goal history may keep a null author reference for the remaining household.
- Play Voice Briefs on device; generated voice scripts and playback metadata are deleted with the account.
- Buy or restore Money Physical; generated reports and stored non-subscription transaction metadata are included in export and deleted with the account.

App Store Submission Checks

- Confirm the live privacy policy URL resolves before submitting.
- Confirm RevenueCat products match:

- `com.rushingtechnologies.zenfinance.coach.monthly`
- `com.rushingtechnologies.zenfinance.coach.annual`
- `com.rushingtechnologies.zenfinance.money_physical`
- Confirm Sentry, Plaid, RevenueCat, and any Expo privacy manifests are included in the native build output.
- Update App Store Connect whenever data collection or third-party processors change.
